Update CRC Properties File (Deprecated from 1.7.12 version)

CRC Properties Configuration

> **1.7.12**
>
> Beginning in 1.7.12, the CRC properties are in the database! See this link.

Prio to 1.7.17 versions, multifact table property is A new property, the **queryprocessor.multifacttable** property, has been added to the **crc.properties** file. When this property is set to true the CRC will now look for multiple fact tables. By default, this property is set to false. If you are going to be using multiple fact tables you will need to update this property to be true.

Property: queryprocessor.multifacttable

Value	Behavior
false	The CRC will continue to work as it does in the classic i2b2. Only one fact table (observation_fact) will be queried ("single" mode)
true	The CRC will work in both modes; single or multiple fact tables.

Update crc.properties file

1. Open the **crc.properties** file and scroll to the section called **Derived/Multi fact table parameter**.
2. Edit the *queryprocessor.multifacttable* property to tell the CRC to query multiple fact tables.

Multi-fact table parameter

```
# Derived/Multi fact table parameter

queryprocessor.multifacttable=true
```

3. Save your changes and close the file.

> **Note**
>
> If the above parameter does not exist in the crc.properties file, then you have to add it so the CRC can query more than one fact table.
