ODM to i2b2 Home

This is the home of the Related Project - ODM to i2b2 importer space.

The Concept behind this project was to develop a solution which would allow for importing of study data from electronic data capture (EDC) systems easily into i2b2. We have developed this in the context of the REDCap EDC system, however the tool is generic enough to be used by any EDC system which can export the study data as CDISC-ODM XML.

The following pages detail the files, installation and use of the importer.
