## Create workdata tables

## **Step 3: Create the workdata tables**

The third step in the workdata installation process is to create the workdata tables by running the following command:

Select the command line that is appropriate for your environment.

## Windows Run Command

%ANT\_HOME%\bin\ant.bat -f data\_build.xml create\_workdata\_tables

## Note

If the command %ANT\_HOME% does not work it may be because you did not set your environment variables (For more information, see the Requirements Chapter in the i2b2 Installation Guide). If you do not wish to set this variable then you will need to replace %ANT\_HOME% with the full path to your Ant directory.
