

Update CRC Properties File

CRC Properties Configuration

In order for the CRC to know there are multiple fact tables the **queryprocessor.multifacttable** property in the **crc.properties** file needs to be updated. By default this property is set to false, however for the i2b2 on OMOP project this needs to be set to true.

Property: queryprocessor.multifacttable

Value	Behavior
false	The CRC will continue to work as it does in the classic i2b2. Only one fact table (observation_fact) will be queried ("single" mode)
true	The CRC will work in both modes; single or multiple fact tables.

Update crc.properties file

1. Open the **crc.properties** file and scroll to the section called **Derived/Multi fact table parameter**.
2. Edit the *queryprocessor.multifacttable* property to tell the CRC to query multiple fact tables.

Multi-fact table parameter
<pre># Derived/Multi fact table parameter queryprocessor.multifacttable=true</pre>

3. Save your changes and close the file.

Note
If the above parameter does not exist in the crc.properties file, then you will need to add it in order for the CRC to be able to query multiple fact tables.
