

getServices - GetUser Request Message

```
<message_body>  
<pm:get_user>demo</pm:get_user>  
</message_body>
```

A **getUser** message is sent by a client application or another cell service to get a user in the PM cell.
The domain, username, and password are sent in the header of the message so it does not need to be sent separately in the *<message_body>*.
