

# getServices - GetRole Request Message

```
<message_body>
<pm:get_role>
<project_id>demoproject</project_id>
<user_name>mikem</user_name>
</pm:get_role>
</message_body>
```

A **getRole** message is sent by a client application or another cell service to get a user in the specific project.  
The domain, username, and password are sent in the header of the message so it does not need to be sent separately in the *<message\_body>*.

Role	Access Full	Access Project	Access Self
ADMIN	X	X	X
MANAGER		X	X
USER			X
