

M_EXCLUSION_CD

Introduced in 1.6 to support modifier terms within the metadata table, a non-null ('X') `_M_EXCLUSION_CD_` indicates the modifier is to be excluded from the specified applied path. Traditional concept terms and non-exclusion modifiers have an `M_EXCLUSION_CD` of null.

An `M_APPLIED_PATH` of `'\Diagnoses\Circulatory system%'` and `M_EXCLUSION_CD` of `'X'` means that the term is a modifier that is excluded from the term(s) with `C_FULLNAME` of `'\Diagnoses\Circulatory system\'` and all its descendants, whereas a `M_APPLIED_PATH` of `'\Diagnoses\Circulatory system\'` applies to the term with `C_FULLNAME` of `'\Diagnoses\Circulatory system\'` only.

IMPORTANT NOTE: The `m_exclusion_cd` must be null for the modifier to appear. Any non-null value, including an empty cell, will cause the modifier to be hidden.
