

# Pages

Individual pages will be used to capture information throughout the Admin module. These pages will be specific to the data that is collected.

## Navigation Bar

A **navigation bar** will remain on the left side of all the pages. This can be used if a user wants to quickly access a particular page.

## Page Heading

At the top of each page will be a *tab* that contains the name of the page and its location.

In the example shown below, the heading tells us the user is in *Manage Projects* for the *demo project*. The page itself tells us they are on the *User page*
