

Storing Query Definitions

By using the mouse, users can drag queries by their *name* from the locations listed below into their workplace.

Query Tool Panel (Query Name field)

The screenshot displays the 'Query Tool' window. At the top, a 'Query Name' field is highlighted with a red box, containing the text 'Ischemic heart @11:25:49'. Below this, there are three columns representing different query groups. The first column, 'Group 1', contains a single query entry: 'Ischemic heart disease'. Each group has buttons for 'Dates', 'Occurs > 0x', and 'Exclude'. To the right of the groups is a list of 'Analysis Types' with checkboxes: 'Patient Set' (unchecked), 'Patient Count' (checked), 'Gender patient...' (checked), 'Vital Status p...' (checked), 'Race patient ...' (checked), 'Age patient b...' (checked), and 'Timeline' (checked). At the bottom, there is a 'Get Everyone' checkbox, a 'Run Query Above' button, and a 'Patient(s) returned:' field.

Group 1	Group 2	Group 3
<div>Dates Occurs > 0x Exclude</div> <div>Ischemic heart disease</div> <div>Drag terms from Navigate, Find and Workplace into this group</div>	<div>Dates Occurs > 0x Exclude</div> <div></div> <div>Drag terms from Navigate, Find and Workplace into this group</div>	<div>Dates Occurs > 0x Exclude</div> <div></div> <div>Drag terms from Navigate, Find and Workplace into this group</div>
