

Methodology

The **Workplace Management (WORK) Cell** is a core i2b2 hive cell that manages project specific XML data objects for users of a given project. The project specific XML data objects originate in other views or cells, such as Ontology or Previous Query and are stored in the WORK cell as a convenience. The project specific XML data objects in the WORK cell are organized in hierarchical structures that represent the relationships between elements. The WORK cell accepts new XML data objects for storage and provides a listing of those items previously stored. It also allows users to organize, label and annotate the stored data objects however they choose.
