

# Phase Two Software

## Summary:

The Accrual to Clinical Trials (ACT) project goal is to create a federated network of National Clinical and Translational Science Award (CTSA) Consortium institutions to significantly increase participant accrual to the nation's highest priority clinical trials. **PHASE ONE** consisted of the formation of a SHRINE network of participating institutions in order to query for aggregate patient counts across all sites in real-time. **PHASE TWO**, as shown in the illustration above, continues the workflow at the local site by enabling the reviewing and selection of patients locally in i2b2.

### Did you know?

Users in Phase One need only the *DATA\_OBFSC* (Obfuscated) i2b2 role for aggregated patient counts in the SHRINE. In Phase Two, users are required to have the *DATA\_LDS* (Limited Data Set) i2b2 role in order to generate a table of patients to review
