

# Manager Viewing Their Employee's Workplace

The functionality for when a manager views the workplace of all the users of a given project.

## User Logs Into i2b2

- The PM returns the roles for a given project
- Role = MANAGER
- Query **WORKPLACE\_ACCESS** table by *PROJECT*
- A list of all workplaces for the PROJECT they are logged into is returned. This list contains *TableCd, TableName* (demo, WORKPLACE, etc.)

## Returning Root Level Folders For The User And Project

- A key (*tableCd*) from home workplace table will prepend the node's index string so that subsequent calls can be sent to the appropriate workplace table.

## Double Click Root Level Folder

- Query **WORKPLACE\_ACCESS** to perform key to table name translation
- Query returns **WORKPLACE\_TABLE\_NAME** to get children of that root node.
- A key from home workplace table will prepend the child node's index string so that subsequent calls can be set to the appropriate workplace table.

## Drag A Leaf

- Extract **WORK\_XML** contents (DnD xml) and drag to appropriate drop site.
