

# i2b2response.xsd

This schema defines the type for the top-level `<response>` tag and the `<response_header>` tag. It is used for validating i2b2 response messages.

- *Additional details about the `<request>`, `<response>`, `<message_header>`, `<request_header>` and `<response_header>` tags can be found in a separate document describing the generic i2b2 message. The remainder of this document describes the contents of the `<message_body>` for the Project Management (PM) Cell.*
