

WORK_DB_LOOKUP Table

Workplace data is distributed to project through the existence of independent databases (in SQL Server) or schemas (in Oracle). In order to support the i2b2 project distribution strategy, the user may be enrolled in numerous projects recorded within the i2b2 Project Management Cell. The logic for selecting the correct database or schema for a project is embodied in the following table:

WORK_DB_LOOKUP			
	COLUMN NAME	DATA TYPE	DESCRIPTION
PK	C_DOMAIN_ID	VARCHAR(255)	Domain (or target location)
PK	C_PROJECT_PATH	VARCHAR(255)	'Project name
PK	C_OWNER_ID	VARCHAR(255)	User ID of owner
	C_DB_FULLSCHEMA	VARCHAR(255)	Full schema name of the workplace table
	C_DB_DATASOURCE	VARCHAR(255)	Data source pointing to the workplace table location
	C_DB_SERVERTYPE	VARCHAR(255)	Database type of workplace table (ORACLE or SQLSERVER)
	C_DB_NICENAME	VARCHAR(255)	Table name
	C_DB_TOOLTIP	VARCHAR(255)	Workplace tooltip
	C_COMMENT	CLOB	Optional comment
	C_ENTRY_DATE	DATE	(null) or specified
	C_CHANGE_DATE	DATE	(null) or specified
	C_STATUS_CD	CHAR(1)	(null) or "D" (deleted)
