

Add Run Query View

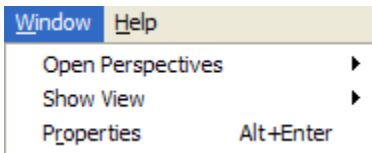

Prerequisite

- If you are running an existing i2b2 Workbench application then the only prerequisite is that you must add the jar file to your plug-ins folder *before* you can add the view to the desktop in the i2b2 Workbench.
- If you are running the i2b2 Workbench application from within Eclipse then there are no prerequisites for adding the view to the i2b2 Workbench desktop.

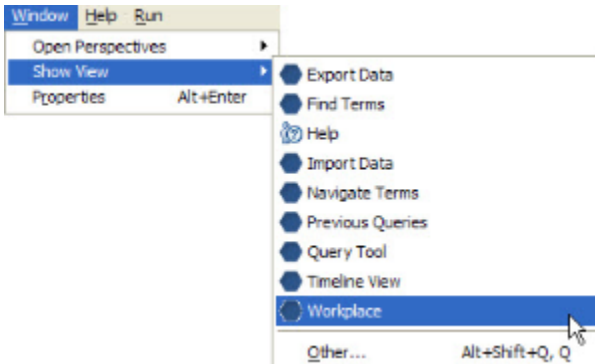

Add the Run Query View to the i2b2 Workbench

When you first log into the i2b2 Workbench, the view for the CRC Tester plug-in will not appear in the i2b2 desktop. It can be added by following these steps:

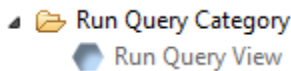

1. Log into the i2b2 Workbench.
2. The Application Menu bar is located at the top of the window.
3. Click on **Window** to display a drop-down menu.

4. Hover over **Show View** to display a list of the core i2b2 Views.

5. Click on **Other**.
6. The *Show Views* window will open.
7. Scroll through the list of views until you see the Run Query View.

8. Click on the *OK* button.
9. The view will be added to the desktop of the i2b2 Workbench.
