

# Users Setup

In order to use the i2b2 Workbench or Web Client a user has to be setup in project management and given access to one or more projects. In addition, variables can be defined for a user that can be specific to one project or used across multiple projects.

## User Data

- General information about the user will be stored in the **PM\_USER\_DATA** table.
- The **USER\_ID** will be referenced in other tables such as *PM\_USER\_PARAMS* and *PM\_PROJECT\_USER\_ROLES*.

The screenshot displays the 'i2b2 Query & Analysis Tool' interface. On the left is a 'PM Navigation' sidebar with 'Hive', 'Projects', and 'Manage Users' options. The main area is titled 'Manage Users' and contains a table with the following data:

full_name	user_name	email	password
Demo User	demo	demoUser@i2b2.org	*****
Emma Bailey	eb23	emmaB@i2b2.org	*****
Liam Kinney	lk46	liamK@i2b2.org	*****
TJ Smith	ts08	tjS@i2b2.org	*****

Below the table are three buttons: 'Save Updates', 'Delete', and 'Add New'.

## User Parameters

- Parameters entered here are *specific to the user* and are not specific to any on project.
- The information will be stored in the **PM\_USER\_PARAMS** table.

## User Project Roles

- The **project user page** captures information regarding which users have access to the project and their role.
- The information will be stored in the **PM\_PROJECT\_USER\_ROLES** table.
  
- *Detailed information about user roles can be found in the project section of this document.*
