Annotated Data Sets

ANNOVAR

This project demonstrates the use of ANNOVAR (www.openbioinformatics.org/annovar) to obtain gene annotations for VCF data. Details can be found in the User's Guide. The tool is designed to work with output as shown here:

ANNOVAR Output File Assumptions:

FUNCTION GENE CHROM START END REF ALT #VCF HEADER NA00001 NA00002 NA00003

In the example above, the sample IDs are NA00001, NA00002 and NA00003.
