

Create workdata tables

Step 3: Create the workdata tables

The **third step** in the workdata installation process is to create the workdata tables by running the following command:

Select the command line that is appropriate for your environment.

Linux Run Command

```
ant -f data_build.xml create_workdata_tables
```

Windows Run Command

```
%ANT_HOME%\bin\ant.bat -f data_build.xml create_workdata_tables
```

Note

If the command %ANT_HOME% does not work it may be because you did not set your environment variables (*For more information, see the Requirements Chapter in the i2b2 Installation Guide*). If you do not wish to set this variable then you will need to replace %ANT_HOME% with the full path to your Ant directory.
