

# Create crcdata tables

## Step 3: Create the Data Repository (CRC) tables, indexes and sequences

The **third step** in the crcdata installation process is to create the crcdata tables, indexes and sequences by running the following command:

*Select the command line that is appropriate for your environment.*

### Linux Run Command

```
ant -f data_build.xml create_crcdata_tables
```

### Windows Run Command

```
%ANT_HOME%\bin\ant.bat -f data_build.xml create_crcdata_tables
```

#### Note

If the command %ANT\_HOME% does not work it may be because you did not set your environment variables (*For more information, see the Requirements Chapter in the i2b2 Installation Guide*). If you do not wish to set this variable then you will need to replace %ANT\_HOME% with the full path to your Ant directory.
