Create crcdata tables

Step 3:   Create the Data Repository (CRC) tables, indexes and sequences

The **third step** in the crcdata installation process is to create the crcdata tables, indexes and sequences by running the following command:

Select the command line that is appropriate for your environment.

Linux Run Command
ant -f data_build.xml create_crcdata_tables

Windows Run Command
%ANT_HOME%\bin\ant.bat -f data_build.xml create_crcdata_tables

> **Note**
> If the command %ANT_HOME% does not work it may be because you did not set your environment variables *(For more information, see the Requirements Chapter in the i2b2 Installation Guide)*. If you do not wish to set this variable then you will need to replace %ANT_HOME% with the full path to your Ant directory.
