# The SMART Views Plugin

## The SMART Views Plugin Overview

The SMART Views plugin was created to facilitate the simultaneous viewing of multiple SMART apps in an EMR-like view. Conceptually designed to be able to run inside the i2b2 web client, the SMART Views itself is a SMART 'frame' app capable of running several SMART apps at once for a single patient's data. Therefore, since the SMART Views app is also a SMART app, it can be run on any SMART-enabled platform, including i2b2.

**Here is the SMART Views 'frame' app running in i2b2 (left) and the SMART Reference EMR (right):**
