

# Working Directory

## Purpose

The ACT software requires a working directory. Here the software creates and updates files for background jobs, caching, and other tasks. The software needs create and write access to this working directory.

## Access

In the ACT\_config.php file, we have provided a default location for your working directory. It is: /opt/viewer\_jobs. **You have to provide the correct access by running the chmod command as shown.**

### Create working directory

```
mkdir /opt/viewer_jobs  
chmod -R a+w /opt/viewer_jobs
```

## Not publicly accessible

Make sure web access is not allowed to this directory

## Storage Needs

At least 0.5 Gigabyte of space is recommended for your working directory
