Working Directory

Purpose

The ACT software requires a working directory. Here the software creates and updates files for background jobs, caching, and other tasks. The software needs create and write access to this working directory.

Access

In the ACT_config.php file, we have provided a default location for your working directory. It is: /opt/viewer_jobs. **You have to provide the correct access by running the chmod command as shown.**

Create working directory

```
mkdir /opt/viewer_jobs
chmod -R a+w /opt/viewer_jobs
```

Not publicly accessible

Make sure web access is not allowed to this directory

Storage Needs

At least 0.5 Gigabyte of space is recommended for your working directory
