

getServices - GetAllGlobal Request Message

```
<message_body>  
<pm:get_all_global>/test</pm:get_all_global>  
</message_body>
```

A **getAllGlobal** message is sent by a client application or another cell service to get a list of global parameters in the PM cell.

The value in the call is the *project path*.

The domain, username, and password are sent in the header of the message so it does not need to be sent separately in the *<message_body>*.
