getServices - GetProjectUserParam Request Message

```
<message_body>
<pm:get_project_user_param>242</pm:get_project_user_param>
</message_body>
```

A **getProjectUserParam** message is sent by a client application or another cell service to get a user parameters value from a specific project. The domain, username, and password are sent in the header of the message so it does not need to be sent separately in the *<message_body>*. The username who is the sender, needs to have the role of **ADMIN** in any project to execute this service or a **MANAGER** or **USER** for the specific project.
