i2b2response.xsd

This schema defines the type for the top-level *<response>* tag and the *<response_header>* tag. It is used for validating i2b2 response messages.

- ***Additional details about the <request>, <response>, <message_header>, <request_header> and <response_header> tags can be found in a separate document describing the generic i2b2 message. The remainder of this document describes the contents of the <message_body> for the Project Management (PM) Cell.***
