Cell Operations

The WORK service is designed as a collection of operations, or use cases.

Service	Description
get_folder_by_userid	Returns a list of root folders available for a given user. These folders are displayed in a tree format. The top level of the tree consists of all the folders a particular user has permission to see, which is determined by his / her role.
get_folder_by_project	Returns a list of root folders available for a given project across all users in the project. These folders are displayed in a tree format. A user must have manager permission and be configured as such to see all folders in a project.
get_children	Expands any level of a folder, providing information about its contents, for a given user.
rename_child	Renames a work item (leaf or folder) in the workplace tree.
delete_child	Deletes a work item (leaf or folder) in the workplace tree.
add_child	Adds a work item (leaf or folder) in the workplace tree.
annotate_child	Annotates a work item (leaf or folder) in the workplace tree by modifying or adding a tooltip.
move_child	Moves a work item (leaf or folder) in the workplace tree and reassigns all its children.
export_child	Export a work item (leaf or folder) as XML to a local file.
get_name_info	Returns information needed about all work item related to a given search keyword or name.
set_protected_access	This webservice will let users set the protected access on any folder or any contents of the folder. If user sets protected access to a folder, all the contents of the folder will recursively get protected access.
