

# Self-Mapping

Self-mapping occurs when the <patient\_id> source is HIVE and the <patient\_id> value already exists in the hive. All hive patient and encounter numbers are mapped to themselves and inserted into their respective tables (either PATIENT\_MAPPING or ENCOUNTER\_MAPPING). The default mapping status is 'A' for ACTIVE and the source value is 'HIVE'.

***Example:***

```
<pid_set>
<pid>
<patient_id source="HIVE">1</patient_id>
</pid>
</pid_set>
```

The row in the PATIENT\_MAPPING table will appear as follows:

| PATIENT_IDE | PATIENT_IDE_SOURCE | PATIENT_NUM | PATIENT_IDE_STATUS |
|-------------|--------------------|-------------|--------------------|
| 1           | HIVE               | 1           | A                  |
