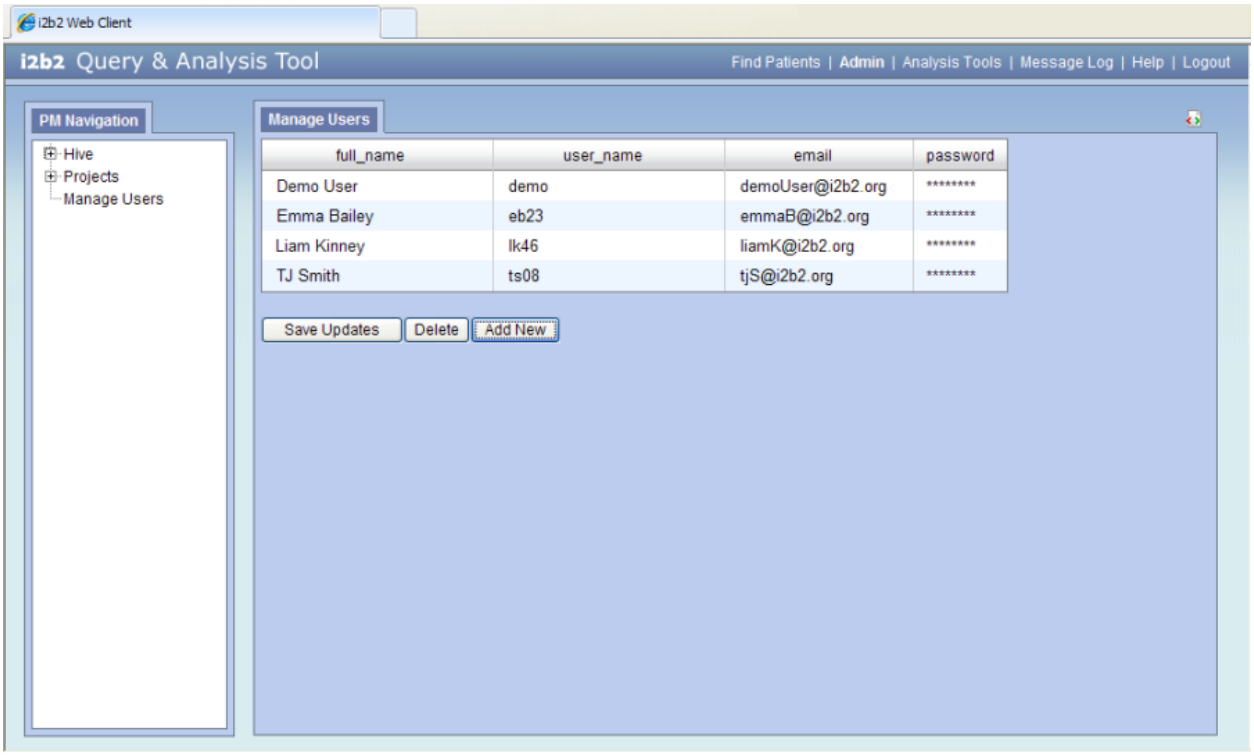
Users Setup

In order to use the i2b2 Workbench or Web Client a user has to be setup in project management and given access to one or more projects. In addition, variables can be defined for a user that can be specific to one project or used across multiple projects.

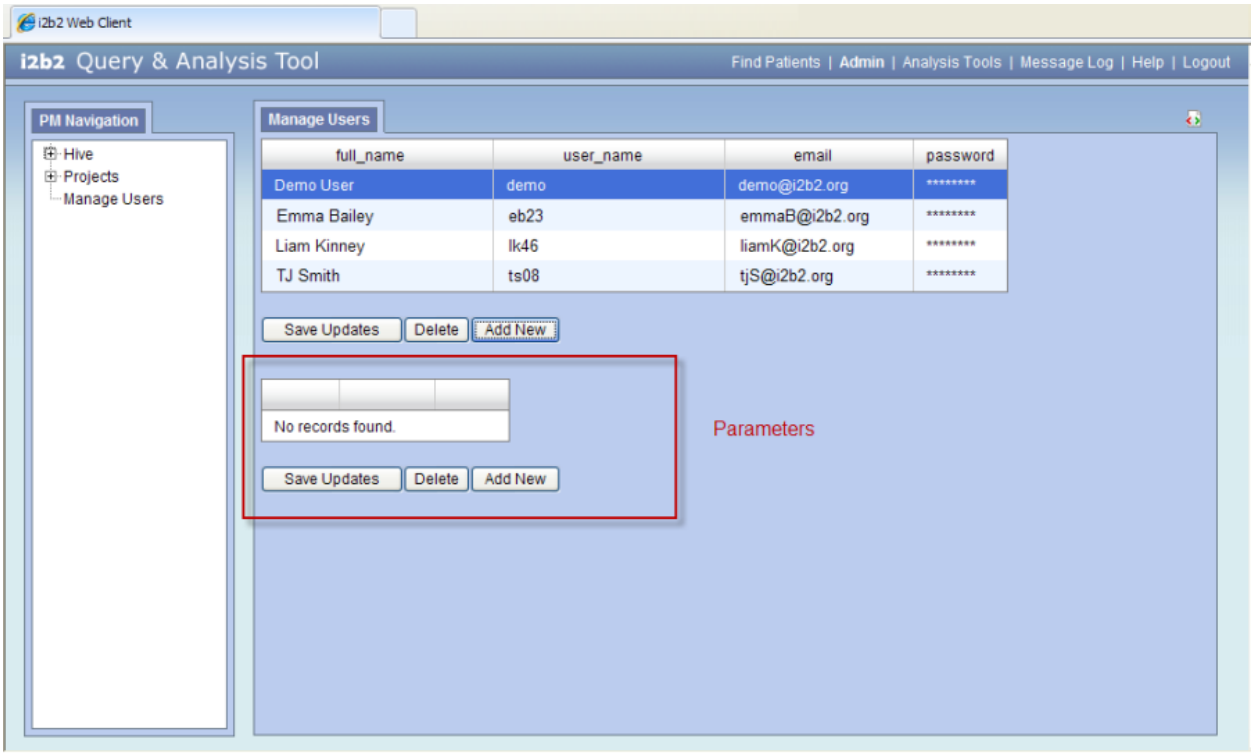
User Data

- General information about the user will be stored in the **PM_USER_DATA** table.
- The **USER_ID** will be referenced in other tables such as *PM_USER_PARAMS* and *PM_PROJECT_USER_ROLES*.



User Parameters

- Parameters entered here are *specific to the user* and are not specific to any on project.
- The information will be stored in the **PM_USER_PARAMS** table.



User Project Roles

- The **project user page** captures information regarding which users have access to the project and their role.
- The information will be stored in the **PM_PROJECT_USER_ROLES** table.

- ***Detailed information about user roles can be found in the project section of this document.***
