

Update CRC Properties File

CRC Properties Configuration

In order for the CRC to know there are multiple fact tables the **queryprocessor.multifacttable** property in the **crc.properties** file needs to be updated. By default this property is set to false, however for the i2b2 on OMOP project this needs to be set to true.

Property: queryprocessor.multifacttable

| Value | Behavior |
|-------|--|
| false | The CRC will continue to work as it does in the classic i2b2. Only one fact table (observation_fact) will be queried ("single" mode) |
| true | The CRC will work in both modes; single or multiple fact tables. |

Update crc.properties file

1. Open the **crc.properties** file and scroll to the section called **Derived/Multi fact table parameter**.
2. Edit the *queryprocessor.multifacttable* property to tell the CRC to query multiple fact tables.

| Multi-fact table parameter |
|---|
| <pre># Derived/Multi fact table parameter queryprocessor.multifacttable=true</pre> |

3. Save your changes and close the file.

| Note |
|---|
| If the above parameter does not exist in the crc.properties file, then you will need to add it in order for the CRC to be able to query multiple fact tables. |
