Upgrade i2b2

About Upgrading the i2b2

The **Upgrade i2b2 space** contains the upgrade documentation and precompiled JAR files that can be used by existing i2b2 sites to upgrade their i2b2 server to the latest version of the i2b2 software. This space is organized as follows:

- **Upgrade to Release 1.7.11 from 1.7.09c** contains the documentation and precompiled JAR files to upgrade the i2b2 server to the current released version of the software.
- **Older Upgrades** contains the upgrade information for previous releases.

As new versions of the i2b2 server are released, the upgrade documentation and the appropriate JAR files will be added to the appropriate pages within this space.
